The above documents are cited in the ISR.

The subject matters of claims 1-18 appear to be novel and to involve an inventive step in view of documents 1-5.

None of documents 1-5 describes a method for producing a carbonic ester, comprising the steps of (1) letting a predetermined reactive organometallic compound of the present application, a non-reactive compound incapable of being reproduced and carbon dioxide react with each other, to obtain a reaction mixture containing a carbonic ester, a non-reactive compound incapable of being reproduced and an organometallic compound capable of being reproduced, and (2) separating the reaction mixture into a portion containing the carbonic ester and the non-reactive compound incapable of being reproduced and a portion containing the organometallic compound capable of being reproduced. This constitution is not considered to be obvious to a person skilled in the art either.
